Excess deaths involving CVD in England since the onset of the Covid-19 pandemic: an analysis and explainer – Posted 3rd July 2023

British Heart Foundation – June 2023

This analysis finds that nearly 100,000 more people with cardiovascular disease than expected have died since the start of the Covid-19 pandemic in England. It means that, on average, there have been more than 500 additional deaths a week involving cardiovascular disease since the Covid-19 pandemic began.

How the public views the NHS at 75 - Posted 3rd July 2023

Health Foundation – 2nd July 2023

As the NHS marks its 75th anniversary, the founding principles of the health service – that care would be free at point of delivery, available to all and funded from tax – are largely the same. But how care is delivered and how the system is organised have changed significantly since 1948.

This anniversary presents a moment to reflect on how far the NHS has come and to look to the future. Recent years have seen the NHS face unparalleled challenges. The COVID-19 pandemic followed a decade of austerity, driving waiting lists to new heights and exacerbating longstanding workforce shortages. Amid record low public satisfaction and unprecedented industrial action, the health service is in crisis. So what does the public think about the NHS now and the challenges that lie ahead?

Our [polling programme](#) tracks public perceptions of the NHS every 6 months. This wave surveyed a representative sample of 2,450 UK adults aged 16 years and older between 5 and 10 May 2023, online via the Ipsos UK KnowledgePanel – the gold standard in UK survey research. Fieldwork started the day after local elections in England and covered the coronation of King Charles III.

Here we present six findings about how the public views the NHS at 75 and perceptions of what the future may bring.

1. The health service makes more people proud to be British than our history, our culture, our system of democracy or the royal family

2. Pride in the NHS is largely related to the NHS model – it being free at the point of use, affordable and paid for through taxation – but only 1 in 4 expect this to survive the next 10 years

3. The public is not confident the health service is prepared to meet key future challenges

4. Concern about the current state of the NHS crosses political divides, but people are split on what is causing pressures

5. Almost three-quarters of the public still think the NHS is crucial to British society and we must try to maintain it

6. There is strong support for increasing NHS funding, with an additional tax the preferred option for raising it

Further information – [How the public views the NHS at 75](#)

Our Public Engagement Strategy 2023 – 2026 – CQC - Posted 3rd July 2023

CQC – June 2023

Our new Public Engagement strategy has 4 clear objectives:

Build a trusted feedback service where people's experiences drive improvements in care.

Create a trusted, accessible information service that meets people's needs.

Develop an inclusive approach to involving people who use services, their family, carers and organisations that represent or act on their behalf in shaping our plans, policies and products.

Work in partnership with organisations that represent or act on behalf of people who use services in our collective endeavour to improve care.

The implementation plan for this Public Engagement strategy sets out timescales and success measures for all the points. We'll monitor our progress on implementing these objectives to make sure we are delivering them and report publicly on our progress.

Read the Strategy – Our Public Engagement Strategy 2023 – 2026 – CQC

Reducing the elective care backlog for people with a learning disability: Calderdale and Huddersfield NHS Foundation Trust - Posted 4th July 2023

NHS Confederation – 29th June 2023

Overview

Calderdale and Huddersfield NHS Foundation Trust (CHFT) embedded a range of initiatives to ensure equitable access, experience, and outcome for people with a learning disability who needed elective surgery.

What the organisation faced

CHFT serves a population of around 440,000 people, approximately 3,000 of which are patients with a learning disability known to the provider.

There is evidence that people with learning disabilities have poorer health and experience greater and persistent healthcare inequalities. This is highlighted in the Learning from Lives and Deaths report in 2021, which shows disparities in avoidable medical causes of deaths between those with a learning disability and the general population.

Despite the persisting challenge of reducing waiting lists for elective care, made harder given the conditions of tackling high demand with limiting resources, it is important to maintain a focus on health inequalities and achieving equity of access and outcome for all patients.

Improvement

To address the health gap between those with a learning disability and the general population, the senior leadership team at CHFT made a commitment to improving the lives of people with a learning disability and embedded a range of initiatives to ensure equitable access, experience, and outcome for this group of patients when they needed elective surgery.

The improvement journey began with dedicated sessions delivered to the board on all aspects of what it's like living with a learning difficulty. An enhanced task and finish group

was also established to take forward these priorities within the trust, with support from those with lived experience.

CHFT adopted a data-driven approach to identify those with a learning disability, understand their experiences and monitor the difference it made. Examples include a flagging system within the patient records, a learning disability data dashboard, and using comparative data to model against the general population.

A big focus was also placed on patient journeys from the point of referral to treatment, focusing on reasonable adjustments that could be made by the trust. CHFT looked at key data around missed appointments, readmissions, length of stay and mortality. This enabled the trust to identify key target areas of prioritisation for people with learning difficulties and key partnership work. For example, collaborative work being undertaken with a private special needs dental service.

Additionally, learning disability champions were made available to staff across the trust to provide training, support, and communication with patients, improving staff knowledge and awareness around learning disabilities.

Through these processes, the trust was able to develop a strong inpatient standard operating procedure for adults with a learning disability and a pilot outpatient service for children and young people.

South Asian families' experiences of neonatal care - Posted 4th July 2023

Bliss – 2022

This project aimed to gather insight and understanding on:

Any barriers families from South Asian communities experience when participating in care on the
neonatal unit

Parent perceptions of the care their baby received, and the care and support they received themselves
on the neonatal unit

Information and support needs of families

Any areas of systemic inequality or inequity experienced by South Asian parents and their babies
The project has also been an opportunity for Bliss to identify how we can be more inclusive in the
information and support that we offer, and how we can better advocate for the needs of all babies,
and their families

Read the Report – [South Asian families' experiences of neonatal care](#)

Digital transformation in the NHS - Posted 4th July 2023

House of Commons Health and Social Care Committee – Ordered by the House of Commons
to be printed 21 June 2023

Successive Governments have recognised the importance of moving the NHS onto a digital footing. "Digital transformation" encompasses "digitising" services and processes that have traditionally been delivered physically, and greater use of innovative approaches to care that are enabled by advances in technology. Digital transformation is vital for the long-term sustainability of the health service: the Department of Health and Social Care (the Department) and NHS England believe that a shift to digital channels (such as the NHS App) is necessary to delivering priorities such as reducing care backlogs and improving access to primary care. Digital can also deliver improvements in care to patients, ranging from increased convenience to access to cutting-edge treatments and diagnostics.
Past attempts at digital transformation have been frustrated by a number of factors. These include the preponderance of old, out-of-date "legacy" IT systems and hardware that cannot handle the demands of a modern digital health service. Parts of the health service still lack even the most basic, functioning IT equipment. The Government recognises that "levelling up" NHS organisations' digital capacity to a minimum
standard is necessary if digital transformation is to proceed across the board. There is reason to be optimistic about the Government's approach, but it will need to address the mistakes of past attempts if it is going to succeed. Digital transformation is not just about new technology. Equally important is the role of the workforce, from leaders to clinicians and frontline staff. Attracting enough skilled digital specialists to the healthcare workforce has long been a challenge, as it is across the civil service: digital specialists can often command better remuneration in the private sector. We recommend that the Government allow NHS England to move away from Agenda for Change pay scales when recruiting Data, Digital and Technology (DDaT)
specialists to ensure it can recruit and retain the people that it needs.

Saving Babies' Lives 2023: A report on progress - Posted 4th July 2023

Sands & Tommy's Policy Unit – May 2023

This report brings together data on pregnancy and baby loss across the UK. It highlights key trends to allow us to assess progress to save more babies' lives throughout pregnancy and the neonatal period. As well as these headline figures it takes a more detailed look at some of the wider factors relevant to achieving our vision of a future where fewer babies die, and inequalities in baby loss are eliminated so that everyone can benefit from the best possible outcomes. By bringing together existing evidence on the state of maternity and neonatal services, we will draw attention to gaps in the evidence and set out areas where further work is required to reduce rates of miscarriage, stillbirth, preterm birth and neonatal death

Over-exposed and under-protected: the long-term impact of COVID-19 on doctors - Posted 4th July 2023

BMA – June 2023

A significant number of doctors and other healthcare workers have developed post-acute COVID, including a large number who developed it as a result of workplace exposure to COVID-19. This paper examines the impact post-acute COVID symptoms have had on the medical workforce, personally and professionally. It provides a unique and valuable insight into the experience of UK doctors suffering from post-acute COVID. It has been informed by a UK survey of over 600 doctors suffering from the continuing effects of an infection with COVID-19, as well as wider research of the issues. The survey was undertaken by the BMA in partnership with Long COVID Doctors for Action. This is the first comprehensive survey of doctors with post-acute COVID health complications. This paper should inform the support needed by current sufferers of post acute COVID in the NHS workforce, and help protect services and patients
now and in the future.

Read the paper –Over-exposed and under-protected: the long-term impact of COVID-19 on doctors

Broken trust: making patient safety more than just a promise - Posted 4th July 2023

Parliamentary and Health Service Ombudsman (PHSO)

This report states that the NHS must do more to accept accountability and learn from mistakes, particularly when there is serious harm or, worse, loss of life. The report sets out recommendations to improve patient safety. These include: better support for families affected by harm; embedding cultures that promote honesty and learning from mistakes; getting the right oversight and regulatory structures to prioritise patient safety; and an evidence-based and long-term workforce strategy that has cross-party support.

Read the Report – Broken trust: making patient safety more than just a promise

Driving better health outcomes through integrated care systems: The role of district councils - Posted 4th July 2023

Kings Fund – 4th July 2023

Overview

District councils have statutory powers over service areas including planning, housing, benefits, and leisure and green spaces, which affect many of the most significant

determinants of health. Around 40 per cent of the population of England live in a district council area.

We interviewed district council officers and integrated care board (ICB) staff in four sites from around England to better understanding the current relationships between local government and ICBs, what good practice looks like, what enables it and the outcomes it produces.

District councils can play a valuable role within integrated care systems (ICSs) because they can influence the wider determinants of health; can act and react in fast and agile ways; and have strong, close connections with local communities.

ICB leaders need to ensure prevention is at the heart of ICSs' mission and purpose, create opportunities for district councils to lead, and use district councils to trial new place-based projects.

District councils need to actively promote the contribution they can make to system working, identify areas of shared priority with other councils, accept accountability for delivering agreed goals on behalf of the system, and invest in building relationships across the ICS.

ICSs have the potential to transform the approach taken to health and care in District councils are indispensable strategic partners in delivering population health improvements.

Read the Report – [Driving better health outcomes through integrated care systems: The role of district councils](#)

[Understanding public perceptions and attitudes to the NHS](#) - Posted 5th July 2023

NHS Confederation – 5th July 2023

Key findings

Despite the challenges faced by the service, there remains a high level of support for the founding principles of the NHS. A majority agree that the NHS should provide a comprehensive service available to all (87 per cent), remain free at the point of delivery (also 87 per cent) and be funded primarily via taxation (83 per cent).

Ratings of how NHS staff are treated are low, with half (52 per cent) dissatisfied with how well staff are treated in the NHS. This reflects that a majority (81 per cent) say that there are too few frontline staff working in the health service at present.

While people are supportive of the NHS model, more are dissatisfied than satisfied with how long they have to wait for certain key services. They highlight funding, low staffing and social care provision as key enablers to help the NHS improve.

The majority do not think the NHS receives enough funding (69 per cent), though six in ten (61 per cent) think it needs to make big changes to the way it runs and provides services to improve, as well as more money.

Reflecting the areas of most concern at present, the public want the NHS to prioritise increasing the number of staff working in the NHS (45 per cent) and improving staff wellbeing (30 per cent) in the near future, alongside reducing waiting times for core services (36 per cent want the NHS to prioritise reducing waiting times for A&E; 35 per cent improving

waiting times for routine hospital treatment and care; and 32 per cent improving access to face-to-face GP appointments).

When presented with potential actions the NHS could take to address the challenges it is facing, the actions the English public think will most help are increasing capacity in social care settings so that people can leave hospital sooner, developing a workforce plan for the number and types of staff the NHS will need to deliver services in the future, and introducing a seven-day work week for all parts of the NHS, meaning appointments are offered at a wider range of dates and times, including at the weekend.

The English, Welsh and Northern Irish public attribute the elective care backlog to a mix of factors. Most typically believe it has resulted from a lack of staff (49 per cent) and space in social care settings (43 per cent), as well as the cancellation of routine treatment and care during the pandemic (42 per cent), and there not being enough funding for the NHS (40 per cent).

Read the Research – Understanding public perceptions and attitudes to the NHS

Digital technology in the NHS: reducing staff pressures, improving care - Posted 5th July 2023

NIHR – June 2023

The NHS is the largest employer in the UK with more than 1.4 million employees. Its workforce is under growing pressure. The population is ageing, increasing demand on healthcare services. The number of staff vacancies are high. The Health Foundation has predicted a shortfall of nearly 1 in 10 (9%) of all NHS workforce posts by 2030 – 2031.

The Department of Health and Social Care has made support for the workforce a key research priority. It is aiming to develop and evaluate technology-assisted workforce solutions both to reduce the burden on staff and to improve patient outcomes. Increased use of technology in healthcare is central to the NHS Long term Plan.

This Collection highlights examples of recent NIHR research that demonstrate ways in which digital technology can improve care while reducing the demands on staff. The technologies include computer decision aids, remote patient monitoring, online support for patients and staff, and virtual reality in psychological therapies.

The research shows that these technologies could bring multiple benefits, both to the workforce, and to patients. They could save healthcare professionals' time, increase the number of people a skilled professional can support, and enable more sustainable workforce models. At the same time, they can promote safer and more personalised care.

The Collection provides useful information for those commissioning and delivering services, including people working across integrated care systems. It sits alongside 2 other Collections: One collection helps members of the public understand digital health technology, the other, upcoming Collection, will describe promising examples of artificial intelligence, or AI, for healthcare.

Facing workforce shortages and backlogs in the aftermath of COVID-19: The 2022 census of the ophthalmology consultant, trainee and SAS workforce - Posted 6th July 2023

The Royal College of Ophthalmologists – March 2023

Key Findings

Workforce shortages remain a serious problem for NHS ophthalmology services across the UK in the aftermath of COVID-19, and have worsened since our last census in 2018. These contribute to and exacerbate the long
outpatient backlogs faced by eye units, which 81% of NHS eye units say they have become more concerned about over the last 12 months. The considerable growth of independent sector providers (ISP) delivering NHS-funded cataract surgery is also having a significant impact on ophthalmology services and its workforce. Although views are mixed, a majority of eye units say that the impact of ISPs on patient care in their unit has been negative. Increasing numbers of consultants also plan to spend more time working in ISPs over the next five years.
The census also found a clear desire among Specialty and Associate Specialist (SAS) doctors for greater recognition and simpler routes for progression in ophthalmology. The work being led by the GMC to reform the CESR process, which RCOphth is contributing to, should support this ambition

Impact Report – Queen's Nursing Institute – 2022 - Posted 6th July 2023

Queen's Nursing Institute – 2023

The nursing profession has faced huge demands during 2022, including workforce pressures that have persisted even as the Covid pandemic has weakened its grip. Our work throughout 2022 demonstrates the flexible and responsive nature of the QNI, adapting our resources to deliver our key objectives, supporting nurses working in all community settings in every way we can.
We have continued to champion the role of nurses working in the community, in primary care and social care, and worked to raise their profile with commissioners, policy makers, media and the public. We have growing evidence that our strategy is contributing to greater

recognition of the indispensable role and impact of community nurses in every field of practice. Community nurses are vital if health services are to manage the increasingly complex needs of the communities served.

We have also supported a significant number of nurses with financial assistance in times of need, and provided emotional support through our TalktoUs listening service, staffed by trained Queen's Nurses.

This impact report captures some highlights of our efforts to provide meaningful support during these challenging times. I would like to thank all community nurses for their dedication and commitment to the communities they serve.

I also encourage all nurses to participate in our many initiatives and projects in 2023. We are an inclusive professional organisation that embraces all students and registered nurses at all levels of experience, working in every setting and field of practice in the community.

New guidance outlines 'Six steps to better care for older people in hospital' - Posted 7th July 2023

Getting It Right First Time – June 2023

Today the British Geriatrics Society (BGS) and Getting It Right First Time (GIRFT) published new guidance aimed at supporting hospital teams to improve care for older people living with frailty.

Six Steps to Better Care for Older People in Acute Hospitals is designed to accompany the new GIRFT Hospital Acute Care Frailty Pathway. It offers detailed measures teams should take to improve care and reduce 'hospital-acquired dependency' for those living with frailty, as well as stressing that interventions should be monitored and linked more widely to community-based services.

In 2021, GIRFT published its national report for geriatric medicine, following a review led by Dr Adrian Hopper. The report focused mainly on the management of frailty in older people, the area of geriatric medicine where there is the greatest risk of avoidable harm and biggest scope for improvement.

It showed that demand for frailty services is growing as people live longer; the number of over-85s in England with dementia or other long-term health conditions is predicted to almost double from 233,000 in 2015 to 446,000 in 2035.

Pre-COVID data shows that between 5% and 10% of people attending A&E departments and 30% of patients in acute medical units are older and living with frailty, with more than 4,000 admissions daily of people with frailty, for reasons such as falls, minor infections and reactions to medications.

The report called for a collaborative approach across whole systems, including primary and secondary care, care homes, community services, ambulance services, local authorities and the voluntary sector. The report stated that this approach should be implemented as best practice to help prevent the progression of frailty and avoid the need for older people to be admitted to hospital where more effective care can be offered elsewhere.

Read the Report – Six steps to better care for older people in hospital

The role of electronic bed management technology in driving capacity improvements - **Posted 7th July 2023**

HSJ – June 2023

The NHS is not alone in needing to address operational challenges, staff shortages and growing elective care backlogs. Health services globally are looking at ways to serve as many patients as possible in the most efficient and effective manner. Improving and optimising bed management is critical to addressing the challenges that hospitals and health systems are facing globally. Currently, however, the information and processes required to ensure the effective management of beds across both acute trusts and the wider system do not work effectively together. A reliance on manual and paper-based processes, white boards, phone calls and dedicated bed management staff walking around a hospital trying to find empty beds is an inefficient way of capturing and sharing data, adding to both delays and staff pressures.

There is growing recognition that a more sophisticated approach is required to manage the complex operational logistics supporting patient flow. This can be done through Care Co-ordination Centres underpinned by healthcare Operations Platforms and electronic bed management technology, which have a vital role to play in the NHS digitalisation strategy. A recent King'sFund article emphasised the importance of interoperability, multidisciplinary collaboration and effective use of different, yet integrated, platforms to address the difficulties facing healthcare systems and patients accessing care.

Care Co-ordination Centres, underpinned by electronic bed management technology, have the potential to increase the visibility of vital information including available resources, bed utilisation, staffing workflows and discharge measures. With a single view of the entire trust, fast information sharing and efficient workflow optimisation, care access, care delivery and care transitions can be more effectively managed to the benefit of both patients and staff.

The state of health and care of older people in England 2023 - **Posted 11th July 2023**

AGE UK – 2023

This report documents how the health and care system is struggling, and too often failing, to meet the needs of our growing older population. It shows how significant numbers of hospital admissions of older people could be avoided if they received help earlier on, before small health problems mushroom into crises requiring urgent clinical support. However, this will only happen if there is a strong political leadership from the government and a drive right across the NHS and local authorities to make it happen.

Read the Report – The state of health and care of older people in England 2023

Digital transformation in the NHS - **Posted 11th July 2023**

House of Commons Health and Social Care Committee – June 2023

This report warns that the government's ambition for digital transformation in the NHS can only succeed if ministers address mistakes of the past. MPs find reason for optimism in the government's approach; however, the report cites evidence that parts of the health service still lack even the most basic, functioning IT equipment. MPs conclude that a shortage of skilled digital professionals in the NHS presents a barrier to digital transformation, with specialists able to command higher wages or better conditions in the private sector. The report recommends allowing additional pay and bonuses to recruit specialist staff.

Can AI help paramedics reduce the number of ambulance journeys? - **Posted 12th July 2023**

NIHR – 12th July 2023

Paramedics could play a key role in reducing hospital admissions, which is one of the Department of Health and Social Care's priorities. Previous work suggests that, with appropriate support, up to 1 in 3 ambulance journeys to A&E could be avoided. This could reduce ambulance handover queues and NHS backlogs.

But it can be difficult for us to decide who to take to A&E. Paramedics manage complex and varied problems, including severe mental illness. We convey people who need emergency hospital care but also those with non-emergency problems such as a mild infection. When treating an older, frail patient, with many health problems, how do we decide what care they need at that precise moment? Even if I am fairly confident that someone's condition is not serious, I may take them to A&E, just in case. We often transport more people than necessary.

Artificial intelligence (AI) could be an excellent tool to support our work, and help us decide that someone can safely stay out of hospital. With this in mind, my research team set out to develop a tool to predict which ambulance patients do not need to attend A&E. Existing transport decision tools help paramedics identify the people most likely to need emergency care. They are less helpful in deciding who does not need to attend A&E; evidence suggests they are no better than clinicians' decision-making.

Further information – Can AI help paramedics reduce the number of ambulance journeys?

Review of neonatal assessment and practice in Black, Asian and minority ethnic newborns: Exploring the Apgar score, the detection of cyanosis, and jaundice - Posted 12th July 2023

NHS Race and Health Observatory – July 2023

A new review published today by the NHS Race and Health Observatory outlines challenges in neonatal care for Black, Asian and minority ethnic babies, alongside clear recommendations on tackling them.

Tests and assessments that indicate the health of newborns, moments after birth, are limited and not fit-for-purpose for Black, Asian and ethnic minority babies, and need immediate revision according to the NHS Race and Health Observatory.

Neonatal assessments, including the Apgar score, a quick observation test used to assess babies minutes after birth was developed in 1952, and is now considered out of date by many healthcare professionals. Based on a score of 1 to 10, with a high Apgar score indicating good health for babies, minutes following birth, the assessments are used as standard by healthcare professionals regardless of a baby's skin tone and can give misleading scores.

The review also highlights particular concerns around perinatal practices including the assessment of cyanosis and jaundice – the development of which has also been based upon

White European babies, and normalised regardless of their applicability to diverse populations and neonates with varying skin tones.

The review presents recommendations for policy, practice and research.

Medical evolution: measures to improve the interface between primary and secondary care - Posted 12th July 2023

Policy Exchange – 2023

The interface between primary and secondary care is the space of a growing volume and variety of activities for the NHS, ranging from referrals to specialist care, diagnostic testing and medicines management. An effective and efficient interface has never been more important, but this analysis finds the equivalent of 15 million GP appointments per year are spent dealing with issues in care management between GP practices and hospitals, creating frustration and patient safety issues. The report sets out 20 recommendations that seek to ensure that the interface is proactively managed in the future.

Integrated urgent and emergency care pathway maturity self-assessment - Posted 13th July 2023

NHS England – 13th July 2023

The delivery plan for recovering urgent and emergency care services sets the ambition to deliver improvements to emergency waiting times and patient experience.

To support these sustained improvements, systems and their healthcare providers across all tiers are asked to self-assess themselves to help identify the maturity of their services and strengthen their improvement plans. These improvements will be supported by a variety of tools and support made available through NHS Impact throughout 2023/24.

National Paediatric Diabetes Audit Admissions report (NPDA) - Posted 13th July 2023

HQIP – July 2023

The National Paediatric Diabetes Audit (NPDA) has published a Report on hospital admissions of children and young people with diabetes, 2015-2020. Based on 38,095 diabetes related admissions between 1 April 2015 and 31 March 2020, it found that all cause admission rates remained constant in England and Wales, despite a downward trend in national HbA1c from 2015/16 to 2019/20. However, there was considerable regional variability. The report also found that rates of diabetic ketoacidosis (DKA) at diagnosis of Type 1 diabetes increased over five years. Other key findings include:

Lower rates of admission with DKA, not at diagnosis, were associated with lower HbA1c and use of real time continuous glucose monitoring (rtCGM) in children and young people with Type 1 diabetes, and

Children and young people with Type 1 diabetes were more likely to be admitted for diabetes related reasons if they were female, of Black ethnicity, or were living in more deprived areas, with longer duration of diabetes associated with higher risk of hypoglycaemia and diabetic ketoacidosis (DKA) admission not at diagnosis.

National Audit of Care at the End of Life (NACEL) 2022/23 report - Posted 13th July 2023

NACEL – July 2023

The National Audit of Care at the End of Life (NACEL) has published its latest report. Based on 7,620 case note reviews, 3,600 quality survey responses and 11,143 completed staff reported measures in England and Wales, this report sets out the findings of the fourth round of NACEL, which took place in 2022. Key findings include:

The possibility that the patient may die within the next few hours/days was recognised in 87% of cases audited, consistent with 2021, and

The median time from recognition of dying to death was recorded as 47 hours (41 hours in 2019), providing a greater opportunity to realise individual wishes for end of life care.

Read the Report – National Audit of Care at the End of Life (NACEL) 2022/23 report

Making the cut? Review of care of patients undergoing surgery for Crohn's Disease (NCEPOD) - Posted 13th July 2023

NCEPOD – July 2023

The National Confidential Enquiry into Patient Outcome and Death (NCEPOD) has published a review of the care received by patients aged 16 and over undergoing surgery for Crohn's Disease titled Making the cut?. Based on data from two periods (1 September 2019 to 29 February 2020 and 1 September 2020 to 28 February 2021), analysis was undertaken

on questionnaires from 553 clinicians, 414 sets of case notes, and 138 organisational questionnaires, all supported by qualitative data from patient surveys and focus groups.

The report found, for patients with drug resistant Crohn's disease, surgery should be considered earlier in the treatment pathway, instead of surgery being perceived as a failure of medical management. It states that, once a decision to perform surgery has been made, it should be undertaken within a month to prevent patients on elective waiting lists deteriorating and requiring emergency surgery. Other key messages include:

Holistic support should be provided for all patients with Crohn's disease, as they have many wider health needs e.g. psychological, dietary and peer support

Medication for Crohn's disease should be managed effectively at all stages of the pathway, and

All multidisciplinary team discussions should be documented in the patient's clinical record at the time of the meeting, with a summary provided to the patient and their GP.

The report makes a number of recommendations which highlight areas that are suitable for regular local clinical audit and quality improvement initiatives by those providing care to this group of patients. It goes on to suggest that the results of such work should be presented at quality or governance meetings and action plans to improve care should be shared with executive boards.

Deaths of children and young people due to traumatic incidents (NCMD) - Posted 13th July 2023

NCMD – July 2023

The National Child Mortality Database (NCMD) has published its latest thematic report on child deaths related to trauma. Covering vehicle collisions, drownings, violence, maltreatment and unintentional injuries, it is based on data from April 2019 to March 2022.

There were 644 deaths of children and young people due to traumatic events, an overall rate of 17.72 deaths per 1 million children per year. The death rate was highest for children under 5 and for 15-17 year olds, as well as for males. Risk of death also differed according to ethnicity of the child, the level of deprivation where they lived, and the season of the year – though living in urban or rural environments did not appear to affect the overall risk. Other key findings include:

Death as a result of a vehicle collision was the most common cause of traumatic death for children (5.81 deaths per 1 million children per year)

The next most common cause was violence and maltreatment (4.40 deaths per 1 million children per year)

The risk of drowning was estimated at 2.31 deaths per 1 million children per year.

This report contains a number of recommendations for health and care practitioners and policy makers as well as for those from other sectors eg education. These include ensuring that all primary school children receive road safety education, and that children unable to

access statutory or private swimming and water safety tuition are given class-based water safety education.

Socioeconomic differences in the impact of oesophago-gastric cancer on survival in England - Posted 13th July 2023

NOGCA – July 2023

The National Oesophago-Gastric Cancer Audit (NOGCA) has published a report on Socioeconomic differences in the impact of oesophago-gastric cancer on survival in England which looks at the relative survival among 39,167 patients diagnosed between April 2013 and March 2017. It found that relative survival of all patients with oesophago-gastric (OG) cancer was poor among the NOGCA cohort, at less than 20% at five years from diagnosis. Among patients with a plan for curative treatment, 5-year relative survival was over 40%.

However, there was a socioeconomic gradient in relative 5-year survival across the deprivation groups, from 19.8% in the least deprived group to 15.4% in the most deprived. A gradient was also evident among patients who had a plan for treatment with curative intent (43.2% in the least deprived and 40.3% in the most deprived group), and at one year from diagnosis among patients with a non-curative treatment plan (28.6% in least deprived and 25.4% in most deprived). A greater proportion of patients in the least deprived group had a plan for curative treatment (41% vs 24% in most deprived), but differences in stage at diagnosis were not observed across the deprivation groups.

After adjusting for performance status, the "deprivation gap" in 5-year relative survival was reduced, with the adjusted relative survival being estimated at 18.4% in the least deprived group and 17.9% in the most deprived. This suggests that patient fitness makes an important contribution to the observed differences in relative survival among patients with OG cancer in different socioeconomic deprivation groups.

Epilepsy12 organisational and clinical audits report, England and Wales (2020-22) - Posted 13th July 2023

Epilepsy12 – July 2023

The National Clinical Audit of Seizures and Epilepsies for Children and Young People (Epilepsy12) has published its latest report on combined organisational and clinical audits for England and Wales. Based on data relating to 2020-22 (cohort 4), it found that more children and young people with epilepsy are receiving input from epilepsy specialist nurses and paediatricians, but there remain some children without such access (and rates of wider involvement from other key health professionals remain low).

More specifically, the proportion of children and young people diagnosed with epilepsy who received input from a paediatrician with expertise within the first year of care increased from 88% in cohort 3 to 91%. However, only 21% were seen within 2 weeks of referral, as

recommended by NICE guidelines (with 13% waiting more than 16 weeks). Other key findings include:

Some children and young people with epilepsy may be missing out on, or having a delayed identification of, mental health conditions, and 'anxiety' in particular may be under-reported

There was a higher proportion of children and young people diagnosed with epilepsy living in the most deprived areas (most deprived quintile), compared to others

Few children and young people had evidence of a school Individual Healthcare Plan (IHP), with the documented use of school IHPs having increased little since cohort 1 (5% increase).

This report also contains examples of the work of the Epilepsy12 Youth Advocates group, who champion ways to improve care for children and young people with epilepsy.

Investigation highlights gaps in care for those with life-limiting illnesses - **Posted 13th July 2023**

HSIB – 13th July 2023

Palliative and end of life care is 'variable and inequitable' across the NHS in England, says our latest report.

The report sets out an investigation we undertook examining the quality and consistency of palliative care provided to adults. Since 2004, and even with a national strategy in place since 2008, numerous publications have highlighted concerns about the limitations of the delivery of palliative and end of life care. These limitations may be more noticeable in areas where funding for services is limited or where care is being delivered across wide geographical areas.

Our investigation offers a system-based lens on the delivery of palliative and end of life care, and why that delivery does not always meet people's needs or what they should expect to receive.

Read the Report – Variations in the delivery of palliative care services to adults

A picture of health? Examining the state of leadership and management in healthcare - Posted 14th July 2023

Social Market Foundation – July 2023

The UK's health care system lags behind those of many comparable countries, despite signs of slow improvement in some areas in the years before the pandemic. This report examines the role that better leadership and management can play in both lifting up the tail of underperforming health care providers and fostering more 'outstanding' health care providers, so that health care outcomes in this country are much closer to those of the best systems in the world.

The birth charter for women with involvement from children's social care - Posted 14th July 2023

Birth Companions – July 2023

This charter sets out how services and systems in England should support all women involved with children's social care from conception to their child's second birthday – the period known as the '1001 critical days'. It outlines 14 principles to help protect women's rights to safe, fair and compassionate care, and calls for a national health and social care pathway for pregnant women and mothers of infants who are subject to pre-birth or parenting assessment, or child protection proceedings

9th Report – NHS Dentistry – Health and Social Care Committee - Posted 14th July 2023

Health and Social Care Committee – 14th July 2023

NHS dentistry is facing a crisis of access, resulting in a decline in oral health. The Government needs to undertake urgent and fundamental reform if people are to receive the dental and oral healthcare they need. It is frustrating to have to return to recommendations made by our predecessor Committee fifteen years ago that still haven't been implemented. Rarely has an inquiry been more necessary. Throughout the course of this inquiry, as well as in our roles as constituency Members of Parliament, we have heard stories of people in pain and distress due to being unable to see an NHS dentist. This is totally unacceptable in the 21st Century.

Stretched to the limit: tackling the NHS productivity challenge - Posted 14th July 2023

NHS Providers – July 2023

In this report we explore the main barriers trusts are facing as they seek to recover performance and improve productivity. We also consider the financial impact of current pressures and the scale of the efficiency ask, which is even more stretching than in 2022/23.

We look at what trusts are already doing, both within their own organisations and in collaboration with system partners, to improve patient flow, reduce costs, deliver operational efficiencies, and improve productivity.

We also highlight what is needed from government and national bodies, in the short term and long term, to enable NHS providers to deliver the level and quality of healthcare the public expects and deserves.

Progress with the New Hospital Programme - Posted 17th July 2023

NAO – 17th July

This report examines whether NHP is being managed in a way that is likely to achieve value for money. To reach our conclusions, we considered the extent to which NHP:

- was designed and set up to manage the programme effectively
- is making progress against its baselines for time, cost and quality
- and is effectively identifying and managing the main risks to successful delivery
- Our report is organised in four parts, which cover:
- the need for new hospitals
- progress made by NHP between 2020 and 2023
- issues, risks and opportunities for NHP
- how government reset NHP in May 2023

NHP comprises many local construction schemes. While this report sometimes discusses individual schemes by way of example it does not set out to provide a detailed assessment of each scheme.

Five principles for implementing the NHS Impact approach to improvement in England - Posted 17th July 2023

Health Foundation – 21st July 2023

Key points

The NHS is facing an unprecedented range of workforce, financial and performance pressures. The time has come to think and act differently and to do so at pace. What is needed is a strategy and management system capable of maximising the impact and spread of the many promising NHS-led innovations, service improvements and new technologies.

The new NHS Impact approach to improvement could help to meet this need. It rightly articulates the importance of taking an aligned and integrated approach to improvement delivery and capability building across NHS provider organisations and integrated care systems (ICSs). Carefully implemented it could help to tackle the NHS's most entrenched challenges, such as improving flow along urgent and emergency care pathways and improving GP access.

To support the implementation of the NHS Impact approach to improvement by provider, ICS and national leaders, this long read sets out five guiding principles and some recommendations.

Given the many challenges facing providers and ICSs, and the complexity involved in driving system-wide improvement, NHS England and its partners need to be realistic about the pace at which the improvement approach can be implemented. They should also take account of the different levels of improvement skills, knowledge, infrastructure and cultural maturity between organisations and care sectors, which could lead to uneven progress in implementing the improvement approach.

Efforts to build learning processes and cultures across and between ICSs, which are vital in sustaining improvement across systems, need to be prioritised. Meanwhile, provider and integrated care board (ICB) leaders need to strengthen their strategic ambidexterity – the ability to balance short-, medium- and long-term strategic and operational priorities.

The NHS Impact approach to improvement should be the defining way of doing things for providers, ICSs and national bodies. For this to happen it needs to become a centrepiece of national health care policy.

UEC (Urgent & Emergency Care) recovery plan delivery and improvement support - Posted 17th July 2023

NHS England – July 2023

Today, we are launching the first of our NHS Improving Patient Care Together (NHS Impact) Programmes relating to the UEC Recovery Plan.

NHS Impact is our national programme to support the use of evidence-based quality improvement in every system and provider. We have developed this universal support offer for the UEC Recovery Plan following feedback from regions, systems and providers to assist you with improvement across the integrated UEC (iUEC) pathway.

The delivery plan for recovering urgent and emergency care (UEC) was published in January 2023 and set two key ambitions for 23/24:

Patients being seen more quickly in emergency departments: with the ambition to improve to 76% of patients being admitted, transferred or discharged within four hours by March 2024, with further improvement in 2024/25.

Ambulances getting to patients quicker: with improved ambulance response times for Category 2 incidents to 30 minutes on average over 2023/24, with further improvement in 2024/25 towards pre-pandemic levels.

We know that there has been good progress in developing local plans and ICBs have been working with colleagues across the system and with regional teams to prioritise local improvements to deliver these ambitions.

Following our letter in May confirming your tiering allocation, we are now able to launch our universal support offer. The offer aligns all of our iUEC improvement offers, including EECIST and GIRFT and has been co-produced with regional, system and provider colleagues, building on learning from and feedback on last year's Winter Improvement Collaborative.

Supporting the UEC Recovery plan there are 10 high impact initiatives that evidence shows will enable systems to make significant progress in advance of winter in the delivery of improved iUEC performance (Annex A). We ask that systems select four of the ten priority initiatives, at each place level, where engagement will help them to make substantial progress in maturity in advance of winter. Systems may choose more or fewer of the priority initiatives in consultation with the region.

[delivery plan for recovering urgent and emergency care (UEC)](#)

Integrated urgent and emergency care pathway maturity self-assessment - Posted 17th July 2023

NHS England – July 2023

The delivery plan for recovering urgent and emergency care services sets the ambition to deliver improvements to emergency waiting times and patient experience.

To support these sustained improvements, systems and their healthcare providers across all tiers are asked to self-assess themselves to help identify the maturity of their services and strengthen their improvement plans. These improvements will be supported by a variety of tools and support made available through NHS Impact throughout 2023/24.

Self-assessment process

Ahead of this winter, each Integrated Care Board (ICB) is asked to carry out a self-assessment exercise against nine of the high impact interventions outlined below:

In hospital:

- Same Day Emergency Care
- Acute Frailty Services
- Acute Hospital Flow
- Community Hospital Flow
- Out of hospital:
- Intermediate Care
- Virtual Wards
- Urgent Community Response

- Acute Respiratory Illness Hubs
- Single Point of Access

Further information – [Integrated urgent and emergency care pathway maturity self-assessment](#)

[iUEC recovery champions guidance](#) -Systems are being asked to nominate iUEC Recovery Champions who will support systems in these goals and also have the chance to develop themselves through training and peer-to-peer support and networking.

[Fit for the Future: A Modern and Sustainable NHS Providing Accessible and Personalised Care for All](#) - **Posted 17th July 2023**

Tony Blair Institute for Global Change; 2023.

This report proposes how we can keep the principle of health care based on need not on the ability to pay – the originating principle of the NHS – but change radically the way the system works, to incorporate not only what modern technology makes possible, but also the best from health-care systems around the world
