[Investigation report: Advanced airway management in patients with a known complex disease](#)

[JANUARY 26, 2024 ~ LEAVE A COMMENT ~ EDIT"INVESTIGATION REPORT: ADVANCED AIRWAY MANAGEMENT IN PATIENTS WITH A KNOWN COMPLEX DISEASE"](#)

HISSB – 25th January 2024

This report is intended for healthcare organisations, policymakers, and the public to help improve patient safety in relation to the airway management of people who have complex health problems which may affect the anatomy of the airway. The report provides information about the management of difficult airways and associated risks. It refers to people who may require additional help with their breathing and specifically ‘intubation’ in patients who have an anticipated difficult airway.

Health Innovation North West Coast – 24th January 2024

The ‘Delivering a Net Zero National Health Service’ report has set an ambitious target to reach a Net Zero NHS Supply Chain by 2045.

The NHS England Sustainable Procurement team are working towards this goal in partnership with the supply

chain to create world-leading sustainable procurement practices and support the wider system to understand

and embrace the changes required to deliver it.

In support of the net zero ambition, trusts and integrated care systems (ICSs) should have green plans in place,

which set out their aims, objectives, and delivery plans for their carbon reduction strategy. These plans will be

signed off at the board-level and ‘net zero leads’ will be responsible for overseeing delivery.

One significant change that will help the NHS deliver its net zero ambition is a shift away from single use

gowns to reusable gowns. The Net Zero and Sustainable Procurement team are leading a project to review

options available when making this switch and suggest ways to initiate the change. They have commissioned

Health Innovation North West Coast (NWC) to collaborate and to capture any realised sustainability, cost and clinician benefits. Health Innovation NWC are part of a national health innovation network and they work to improve health and generate economic growth across the region through accelerating the spread and adoption of innovation
