

## Evidence for practice

Every month the Library and Knowledge Service will scan the latest published research evidence to bring developments of relevance to general practice to your attention.

[Telemonitoring based service redesign for the management of uncontrolled hypertension: multicentre randomised controlled trial](#)

[Implementation of self management support for long term conditions in routine primary care settings: cluster randomised controlled trial](#)

[Long term effect of depression care management on mortality in older adults: follow-up of cluster randomized clinical trial in primary care](#)

[Risk of incident diabetes among patients treated with statins: population based study](#)

[Expectations for consultations and antibiotics for respiratory tract infection in primary care: the RTI clinical iceberg](#)

[Alarm signs and antibiotic prescription in febrile children in primary care: an observational cohort study](#)

[Reducing antibiotic prescribing for children with respiratory tract infections in primary care: a systematic review](#)

[Cardiovascular risk scores: qualitative study of how primary care practitioners understand and use them](#)

[Development and evaluation of a brief self-completed family history screening tool for common chronic disease prevention in primary care](#)
